

Solar Interruptions: Reflections and Inflections

What is a Solar Interruption? It is an 11 year cycle that the Sun goes through in its evolutionary process. The Sun is an Idea being expressed within the Matrix of Mind. It has an Initial Ideal that evolves according to a Feedback process. As the Initial Ideal unfolds, the Planets and their inhabitants respond to the artificial environment that manifests from that Ideal. Their responses affect the Sun's Ideal and bring about Reflection periods, which are assessments that the Sun carries out to determine its advancement. After each Assessment or Reflection, it gradually adjusts the Ideal in accordance with the Feedback response. These adjustments are Inflection periods that modify the Initial Ideal. The chart ahead shows the Reflection and Inflection periods that start from year 11. A Reflection cycle has numbers that mirror each other i.e. the years 11 or 1001 etc. The Inflections follow each Reflection cycle.

In this chart, we see the first 9 cycles as Reflections. This was a major Assessment period to determine the new era. Everything that occurred before the year 11 time frame was being assessed. There were 81 Inflection cycles that followed before the next Reflection cycle.

Mirror Reflection Multiples are shown in **Blue**. Mirror Reflections are shown in **Red**. 110 year Cycles are shown in **Green**. Inflections are shown in **Black**.

The chart shows the peak of each cycle. The actual cycle starts about five and a half years before. It gradually increases until the peak, and then decreases to a lull at about five and a half years after the peak. From the year 1001 there were 9 Inflection cycles between Reflections.

The years 1991 and 2002 were consecutive Reflection cycles. The year 1991 is a Light year cycle, which brings information that determines Physical enlightenment. The year 2002 begins a Master Ascension transition period. Master Ascension is a term used for final achievement in Form. Form meaning H.U.M.A.N. Self Mastery is the end result of Human Evolution.

As the chart shows, there are cycles in blue that create Mirror Reflection multiples. The numbers of these cycles are all the same i.e. the years 1111 and 2222 etc. They are major Reflections that occur every 11 Reflection cycles.

The year 2013 is the first Inflection cycle peak after the 1991-2002 Reflection periods. That cycle began in about 2007-2008. It peaks in 2013, and begins the 9 Inflection periods or adjustments that come before the next Reflection cycle. The 2013 Sun cycle forms a Lunar Transition period, which brings about major Physical adjustments to the Planet and its inhabitants. The Sun will continue the adjustments to its Initial Ideal until the next Reflection period in the year 2112.
